Design Industrial Partner

UCL – CEGE invites expressions of interest from multi-disciplinary consulting businesses or consortia of smaller organisations for the role of Design Industrial Partner.

The Design Industrial Partner is central to the delivery of design education in CEGE’s unique problem-solving based undergraduate programme.

A central strand of our undergraduate programme is design teaching and learning which is delivered through a variety of problem-solving scenarios; commencing in Year 1 with group-working problem-solving explorations of the principles of design, through Year 2 where undergraduates undertake multi-disciplinary design projects and culminating in the 4th Year Integrated Design Project – this is extends throughout the academic year and forms 50% of the student’s final year.

The Integrated Design Project creates a simulation of a multi-disciplinary design office working on the design a major development project. It has been described by the Joint Board of Moderators as ‘the way all civil engineers should be educated’. Typical recent projects include, a 42 storey multi-use tower on an extremely constricted urban site, an international port development, major railways extensions and airport developments.

The Design Industrial Partner plays a central role in delivering tutoring/workshops and some teaching and essentially passionate support for our students and their futures in the built environment industries.

The contract for this service will run initially for the period of 2018-2020 for a full fee of £42,000 per year.

To discuss this opportunity, or for details of the tender and the application process please contact: Sarah Fray Integrated Design Project Module Coordinator – s fray@ucl.ac.uk. Closing date for tenders will be the 24th of August 2018.
